Kendra

Same skills, redefined outcomes for the AI Era

Two engineers may have identical skills on paper but completely different impact on a team.
Kendra Skilling shows you why

WHAT IS KENDRA SKILLING?

Kendra Skilling is a validated technical skills and team dynamics assessment for engineering organizations. It maps each person's technical strengths against the real demands of software teams, giving managers and HR a shared, data-driven language for how technical talent actually works, not based on subjective evaluation or on what's listed on a resume.

WHY NOW: KENDRA FOR THE AI ERA

Most existing tools measure technical skill in ways increasingly disconnected from how work actually gets done, or they assess team dynamics in isolation, rarely both together, and rarely built for how AI has changed the job. Engineers across the industry are unsettled by what AI means for their careers; the answer isn't reassurance; it's clarity on the right skills to build. Kendra Skilling folds AI-native fluency into the same skills picture as design, debugging, and delivery; a core competency to develop and measure, not a threat to manage around.

WHY IT MATTERS

Building a technical team is the easy part: decide what functions and technologies you need, adhere to budget, train, and execute. Building a technical team that is highly effective is where most managers struggle. Strong people alone aren't enough; you need to match the skills and strengths of each pod within your team to the specific projects and business needs in front of them. Kendra Skilling gives you the visibility to make that match deliberately.

YOUR KENDRA: THE FOCAL FIVE©

Each person's technical profile includes 12 skills which are mapped across five interconnected color domains, arranged in a pentagon. Below is an illustrative sample of individual profile.

BLUE Methodical	55%
RED Outcome Driven	86%
YELLOW Entrepreneurship	84%
PURPLE Can Do Attitude	59%
GREEN Team Player	78%

WHY BE A DESIGN PARTNER

As an early pilot partner, your team doesn't just receive an assessment, you help shape the product itself. Pilot organizations work directly with Kendra's founders to influence the framework, the reporting, and the roadmap, as pioneers of a new way to understand technical teams.

ABOUT THE FOUNDERS

SMADAR GAZIT

Smadar Gazit is a global People and Technology Executive and executive coach with 20+ years leading engineering teams of ~100 people globally at Intuit, PayPal, Cognyte, and Verint. She's built high-performing AI and data platform teams at scale, cutting cloud costs, doubling delivery velocity, and keeping attrition low through major transformations. She's also a Certified Professional Coach.

YARA BEN CHAIM

Yara Ben Chaim, Founder of Foresta, is a Global Leadership Development Expert specializing in accelerating complex organizational change through behavioral alignment; partnering with executive boards, C-suites, and People teams to unlock motivation, drive cross-functional alignment, and foster high-impact innovation.
